

Did your Functional Seizures start after 40?

Invitation to research

What is the study about?

We would like to talk to people diagnosed and living with later-onset Functional Seizures (also known as Dissociative or Nonepileptic Seizures) to understand what they think about their condition (UK only).

Why are we conducting this study?

We want to help improve how healthcare professionals support people with later-onset Functional Seizures.

Who can take part?

If your Functional Seizures started *after* the age of 40
and

You *do not* also have a diagnosis of epilepsy
and

You are willing and able to complete a questionnaire and be interviewed by phone or online video call by the researcher
(Dr Isobel Williams)
