
Psychoactive Substance Use in Functional Neurological Disorder (FND)

Participants required for an ongoing study

Research Participants Needed/Wanted

Have you been currently diagnosed with Functional Neurological Disorder (FND) and use psychoactive substances such as psychedelics, MDMA, or cannabis? The current study being undertaken at King's College London aims to better understand how those with FND self-medicate with psychoactive substances in relation to their symptoms by conducting qualitative interviews.

Participants must be 18 years of age or older and also be fluent in English. If the above criteria are met, please follow the online link to fill out a short pre-screening questionnaire to be further considered by the research team.

Thank you for your interest in participating in the study.
